

Press Release February 20th, 2019

bpost chose Colibus for Green last mile deliveries

Colibus, in association with AB Joost Belgium, is delighted to confirm the announcement made by bpost Belgium regarding their purchase of specially constructed 100% electric Colibus to develop their Emission-Free fleet for last-mile delivery.

bpost has deployed a prototype Colibus vehicle for almost a year and this has enabled us to custom build a vehicle to their design and specification

This Pilot fleet will be supported by members of the Renault Trucks network in Belgium, Van Hove Group and Lens Motors who are ideally located to act in technical support in the 10 locations selected by bpost.

This development further proves the adaptability of the Colibus and the Company's ability to react quickly to specific customer demand.
